## **Open Source Storage Lights Up New Data Center for Infinidisc**

**LITTLETON, CO (March 3, 2009)** [Open Source Storage](#), a leading developer of Network Attached Archival products, announced the opening of their Infinidisc data center. The new Infinidisc data center will satisfy the growing demand for the new Infinidisc Archive Appliance which incorporates fully automatic and transparent vaulting technology. The combination of the Infinidisc Archive Appliance and the award-winning Infinidisc Vaulting Software continues to drive the overall value proposition and ROI for the customer. This ensures that Infinidisc customers can be confident of complete open network compatibility, functionality and full interoperability between the cloud and the enterprise.

The opening of our new data center as part of the Infinidisc Archive Initiative is very attractive to our customers,” said Chuck Larabie, Vice President of Marketing “more importantly; our commitment to open standards assures our customers of long term accessibility and preservation of their data.

A Greener Data Center. The Infinidisc Data Center has been designed with the future in mind. Located in the cool Rocky Mountains the Infinidisc Data Center is able to capitalize on the cool alpine air utilizing a state of the art “air side economizers” reducing power and cooling costs by up to 20%. This savings is passed directly to the customer.

The Infinidisc Archive Appliance eliminates the need for traditional proprietary archival solutions by delivering a complete appliance vaulting solution which transforms the classic and costly capital expense to an affordable subscription service. Appliance pricing starts at \$600 and unlimited data subscriptions are \$89.00
